Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

08-SEP-2000;
                                            Grave's disease, glomerulonephritis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus, systemic sclerosis, ulcerative colitis, haemodialysis, uveitis; viral, bacterial, fungal, parasitic, protozoal, helminthic infections and trauma; and muscle disorders include cardiac myopathy, myocarditis, polymyositis, arrhythmias and hypertension. The TRICH polynucleotides are used in gene therapy. The present sequence is human TRICH-22 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human transporter and ion channel polypeptide designated TRICH and nucleic acid molecules encoding such polypeptide TRICH sequences are useful for diagnosis, treatment and prevention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 96; Page 220-221; 230pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human transporters and ion channels polypeptides and polynucleotides for diagnosing, preventing or treating transport, neurological, muscle, immunological and cell proliferative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-206330/26.

Ataxia gene sequences are useful in gene therapy, and as diagnostic tools or reagents for identifying a characterizing genetic defect involved in the disorders and disease related to ataxia.

This sequence is used in an expression plasmid operably linked to the tac promoter, a ribosome binding sequence, the E. coli outer membrane protein OmpF signal peptide coding sequence and a sequence coding for the N-terminal extracellular site of either the gamma-aminobutyric acid (GABA) A receptor alpha-subunit or the glycine receptor alpha-subunit. This expression plasmid can be used to transform E. coli to produce an N-terminal extracellular site protein of ion channel direct binding type receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prepn. of N-terminal extracellular site protein - l E.coli transformed by a plasmid comprising the tac binding site, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                JP04144683-A

The patent discloses novel human ion channel polypeptides and their corresponding polynucleotides. The ion channel sequences and their modulators are used for the treatment of viral infections (e.g., human immunodeficiency virus (HIV)); thyroid disorders (e.g., thyrotoxicosis, myxoedema), renal failure, inflammatory conditions (e.g., Crohn's disease), rheumatoid arthritis, autoimmune disorders, pain, stroke, psychotic and neurological disorders (e.g. anxiety, depression and schizophrenia), dyskinesias (e.g. Huntington's disease), degenerative disorders (e.g., Parkinson's disease, Alzheimer's disease), cardiovascular diseases, cancer, metabolic disorders (e.g. anorexia, obesity) and mental disorders. The present sequence is a cDNA encoding human ion channel-93 (ion93) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 554 BP; 158 A; 124 C; 135 G; 137 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents the human ataxia gene. The ataxia protein and polymucleotides are useful for diagnosing and treating disorders related to ataxia. Ataxia gene sequences are useful in gene therapy, and as diagnostic tools or reagents for identifying and characterizing genetic defect involved in the disorders and diseases

                                                                             Š
                                                                                                                                                                              Matches
                                                                                                                                            Query Match
                                                                                                                                                                                                      genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition indicator when screening for ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Examining the ischemic condition (e.g. expression levels of particular genes by determining the expression profile genes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genes

GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins GABA-gated chloride channel proteins for a GABA related parasites such as mites. The present sequence is Dermacentor variabilis clone 8 GABA-gated chloride channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      animals, comprises the Dermacentor (GABA)-gated chloride channel -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1614 BP; 369 A; 475 C; 422 G;

                                                                                                                                                              The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DMA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins capture chloride channel proteins capture chloride channel proteins. The present sequence is Dermacentor variabilis clone 5 GABA-gated mites. The present sequence is Dermacentor variabilis clone 5 GABA-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gamma-aminobutyric acid; GABA; tick infestation; mite;

                                                                                                                                                                                                                                                                                                                                                         The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DMA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide useful for preventing or treating tick infestation, humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric aci (GABA)-gated chloride channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gamma-aminobutyric acid; GABA; tick infestation; mite; antiparasitic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human GABA-A receptor. It was isolated from human hippocampus cDNA using a probe generated from rat brain cDNA using primers (see also AAT28996-97) based on the rat delta sequence. The cDNA can be incorporated into a vector and used to direct expression of the delta subunit in transfected cells, partic rodent fibroblasts. Co-transfected host cells capable of expressing the delta, alpha-4, (see also AAB97298) and beta subunits can be used to screen or design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            receptors contg. these subunit(s),

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Вþ
The invention relates to an isolated mammalian polypeptide (I), which is CC a mutant of gamma-aminobutyric acid (GABA) receptor subunit. The mutation CC disrupts the functioning of an assembled GABA receptor, its functional CC fragment or homologue, and creates a phenotype of epilepsy, anxiety, CC manic depression, phobic obsessive symptoms, Alzheimer's disease, CC schizophrenia, migraine and/or obesity. (I), the polynuclaotide (II) CC encoding (I) and antibody (III) to (I) are useful in the diagnosis of CC epilepsy, anxiety, manic depression, phobic obsessive symptoms, CC Alzheimer's disease, schizophrenia, migraine and/or obesity. (III) is CC useful for treating the above conditions. (I)-(III) are useful in CC screening of candidate pharmaceutical agents, where high-throughput CC conditate gene expression in biological samples. Oligonucleotides or CC quantitate gene expression in biological samples. Oligonucleotides or CC conditions derived from (II) are useful as probes in a microarray CC used to monitor the expression level of large number of genes. (I)-(III) care useful for the study of the function of a GABA receptor, to study the mechanism of the disease as related to GABA receptor, for the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; Anticonvulsant; Tranquiliser; Antimanic; Antidepressant; Nootropic; Neuroprotective; Neuroleptic; Antimigraine; Anorectic; gamma-aminobutyric acid receptor subunit; GABA; epilepsy; anxiety manic depression; phobic obsessive symptom; Alzheimer's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABK27334
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mutant gamma-aminobutyric acid receptor subunits and DNA molecule, useful for diagnosing epilepsy, Alzheimer's disease, migraine, obe anxiety, manic depression and schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 schizophrenia; migraine; obesity; receptor; gene; ds.

                                                                                                                                                                                                                                                                                                       CC Dermancentor variabilis (DV) (American dog tick) ligand gated innocation channel/L-glutamate gated chloride channel (LGC/GluCl) protein.

CC LGIC/GluCl DNA is useful for identifying a compound that modulates

CC glutamate-gated channel protein activity and for identifying a modulator

CC of LGIC/GluCl Channel protein. LGIC/GluCl DNA is used for establishing

CC novel insecticide screens, validate potential lead compounds with

CC insecticidal activity for use in treating parasitic infections in humans

CC or animals, as hybridisation probes to isolate related genes from other

CC organisms to establish additional pesticide drug screens and also used

CC in competition. binding experiments or for functional chloride channel

CC channel. Heterologous expression of LGIC/GluCl protein allows the

CC channel. Heterologous expression of LGIC/GluCl protein active against parasitic

CC invertebrate species relevant to animal and human health, especially in

CC intertebrate species relevant to animal and human health, where the

CC modulators act as effective insecticidal, acaricidal, mitacidal and/or

CC mematocidal treatments for use in animal and human health and/or crop

CC specific disorders. The present sequence is Rhipicephalus sanguineus

CC Genes

CC Control CC Lond I probe which is used for screening Dermacentor LGIC/GluCl 1

The invention relates to gamma aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Rhipicephalus sanguineus GluCl DNA probe which is used for cloning Dermacentor variabilis GABA-gated chloride
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO200174884-A1
                                                                                                                                                                                                                                                                                                                                                                                 New polypeptide useful for preventing or treating tick infestation, humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric aci (GABA)-gated chloride channel -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (MERI ) MERCK & CO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Rhipicephalus sanguineus (brown dog tick) (L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, fleas, ticks, mites and lice. Heterologous cell lines expressing functional GluCl1 and GluCl2 channel functional forms are useful for establishing functional or binding assays to identify novel collucil channel modulators. The present sequence is R. sanguineus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Brown dog tick; glutamate-gated chloride channel; GluCl1; GluCl2; crop protection; insecticide; nematocide; acaricide; clone T82; ss.
                                                                                                          The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, fleas, ticks, mites and lice. Heterologous cell lines expressing functional GluCl1 and GluCl2 channel functional forms are useful functional functional of the second control of the second c
